Internet Connection Manager

The all-in-one threat and connection manager

- 1_ Kerio NG series
- 2_ Kerio installed within the Videoworks rack
- 3_ Kerio's traffic management
- 4_ Load balancing feature
- 5_ Web and Content Filtering feature

Kerio Control is an all-in-one unified threat and bandwidth management solution that brings comprehensive network protection and intelligence to Yachts. It's a solid answer to Shipowners' and Captains' questions such as:

«I need faster Internet access than the others!» - the Owner

«Web browsing seems slow. What is consuming all of our bandwidth?» - the Captain

With an ever-increasing range of off vessel internet connections offering a wide variety of cost / speed benefits, the ability to switch between services has never been more important.

The **Load Balancing** feature permits to distribute traffic across multiple connections ensuring constant internet service.

A **Kerio Control** router allows you to take control of your WAN connections as well as efficiently managing your LAN traffic. Users can remotely access the network through virtual private networking, while admins can remotely manage the firewall through a web interface. Whether you run a commercial ship or a luxury yacht, a **Kerio Control** router can save you both time and money.

Kerio Control main features:

- > Bandwidth Management
- > Load Balancing
- > Anti - Virus
- > Firewall, Router, IPS / IDS
- > Web & Content Filtering
- > Usage Management and Reporting
- > Secure VPN
- > Flexible Deployment

In-depth analysis

Load Balancing

Easily prioritize and monitor network traffic to guarantee high-speed transmission for the most important traffic types. **Internet Link Load Balancing** optimizes Internet access by distributing traffic across multiple links. **Kerio Control** monitors link availability, and automatically disables or re-enables links to ensure continuous Internet access. **Kerio Control** also uses **Internet Link Load Balancing** to distribute specific users onto specific connections.

Web and content filtering

Kerio Control Web Filter allows administrators to allow, deny or limit the applications, websites and Internet services users can access. This powerful filter:

- > *Protects users and infrastructure by preventing visits to known malicious sites or those that engage in phishing attacks or identify theft.*
- > *Blocks objectionable sites to ensure compliance and shield you from liability.*
- > *Increases productivity by limiting access by application or site content category to a specific time of day, selected users, and specific user locations.*
